

4G mobile broadband

Service Features and Benefits

4G networks seem to be coming of age as a viable broadband alternative, but as with all radio based networks there is an extra dimension of complexity to plan for.

Super-fast mobile broadband is no longer a thing of the future 4G and 4G+ broadband are available now in a vast number of locations, Pink Connect are experts in the supply and setup of this breakthrough super-fast 4G mobile connectivity.

Not all network operators are equal. For the first time in UK History, the claims that one network is significantly better than the others has a basis in fact. Pink Connect uses EE which is the UK's biggest and fastest network with 90% UK coverage.

EE is always one step ahead, being the first operator to introduce 4G to the UK, double speed 4GEE and now 4G+.

In many areas with poor landline ADSL speeds, 4G data may be a viable alternative for your slow office Internet connection.

4G and 4G+ are the first data connections that really work for business, far exceeding 3G for both speed and reliability. Download and upload speeds are consistently far higher – providing a vital solution to small businesses looking to compete in an increasingly data-hungry environment but at a realistic cost

We have tested a wide range of dongles and routers to come up with what we believe to be the optimum solution. **Achieve the best 4G coverage for your business!**

TECHNICAL SUPPORT

The essential conduit between your business and the world!

Don't leave it to chance, have an industry expert ensure the right connection for today's demanding business environment.
